K-ROLL

GENERAL DESCRIPTION

K-Roll is a mobile system that allows to provide mobility to the seats without affecting their design and functionality.

The feet have a lever system by means of an integrated trigger, which, activated by the foot, blocks the wheels and fixes the seats to the floor without the need of any type of screw or fastening. With the wheels unlocked, it allows a 360° movement of the set of seats.

ADVANTAGES

Based on the arrangement of groups of 4 or 5 seats on benches, these incorporate 2 self-supporting metal feet with retractable wheels, which allow a 360° movement of the set, facilitating the distribution changes. K-Roll allows us to distribute the seats in the space according to the needs of each event, since the movement of the benches is done easily and without using any additional mechanical element.

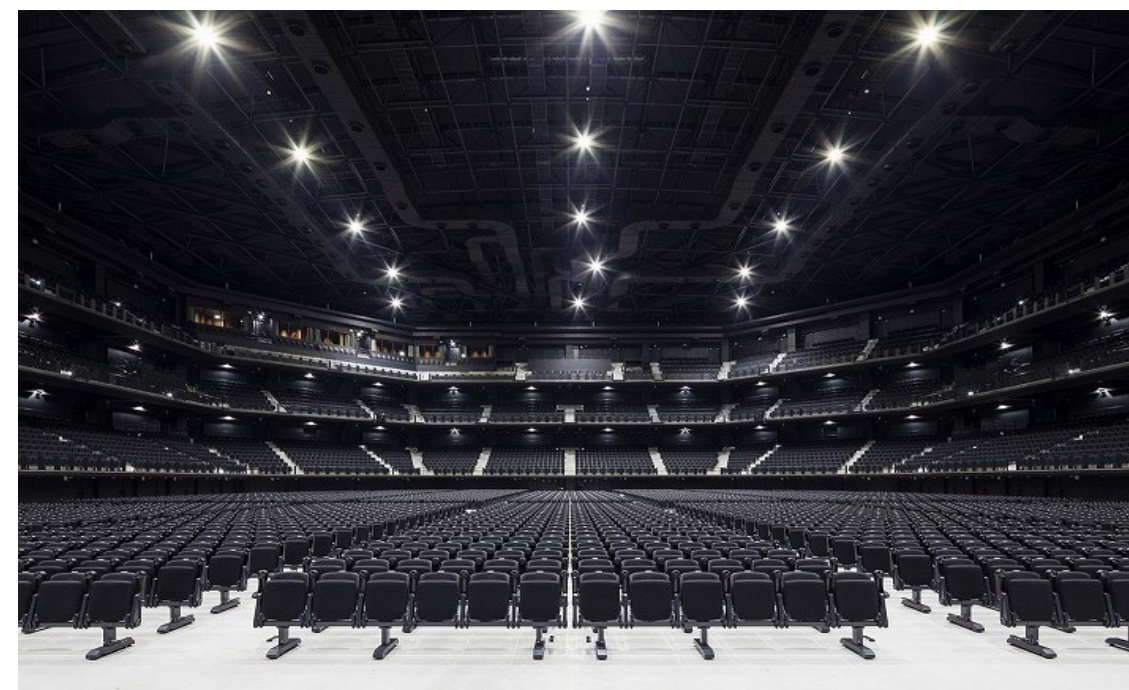

DIFFERENTIATIONS

A simple lever system with a foot-operated trigger locks the wheels so that the support plate rests completely on the pavement, providing the necessary stability and fixation for its use, without the need for any type of screw or fastening. This system allows the seats to be grouped together to form a compact block, minimizing the space required for storage.

K-Roll is the perfect solution for those multifunctional spaces where multipurpose uses are intended.

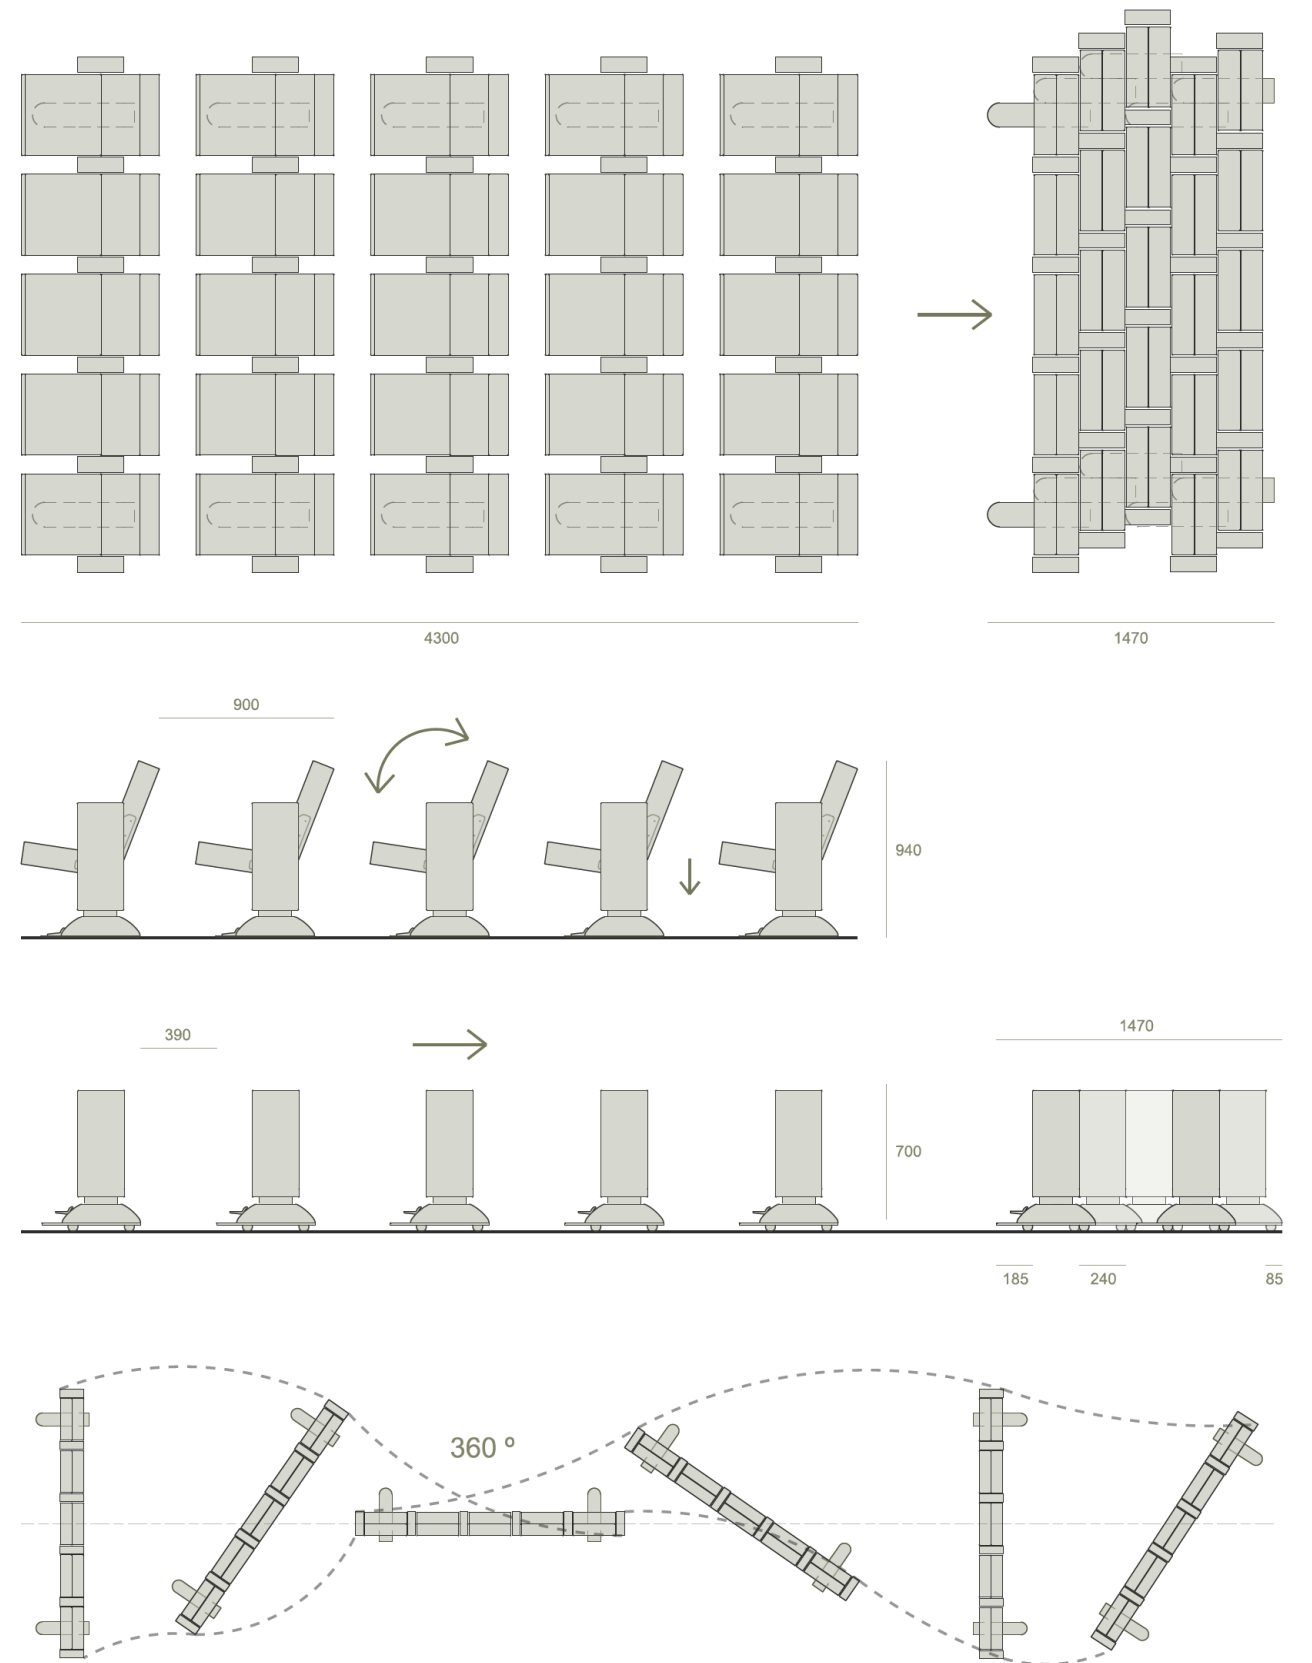

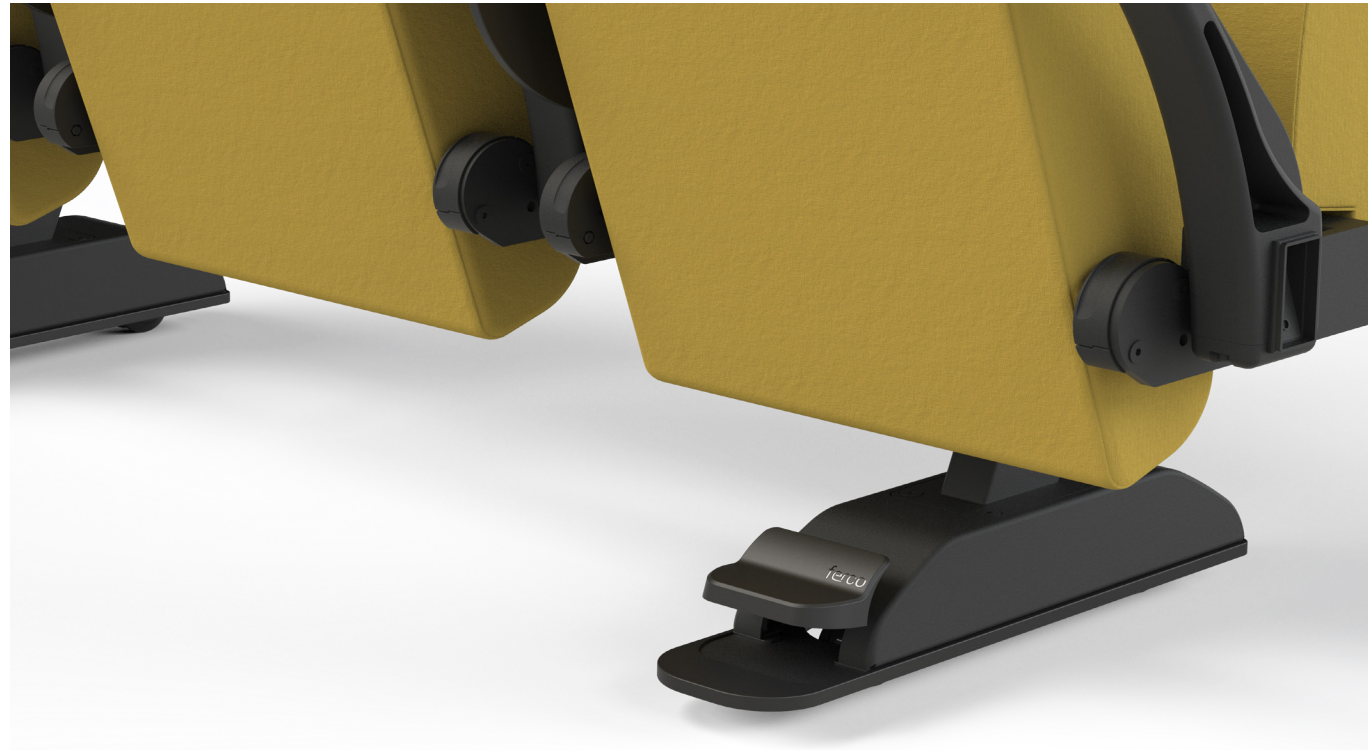

ECO-FRIENDLY (Lifetime)

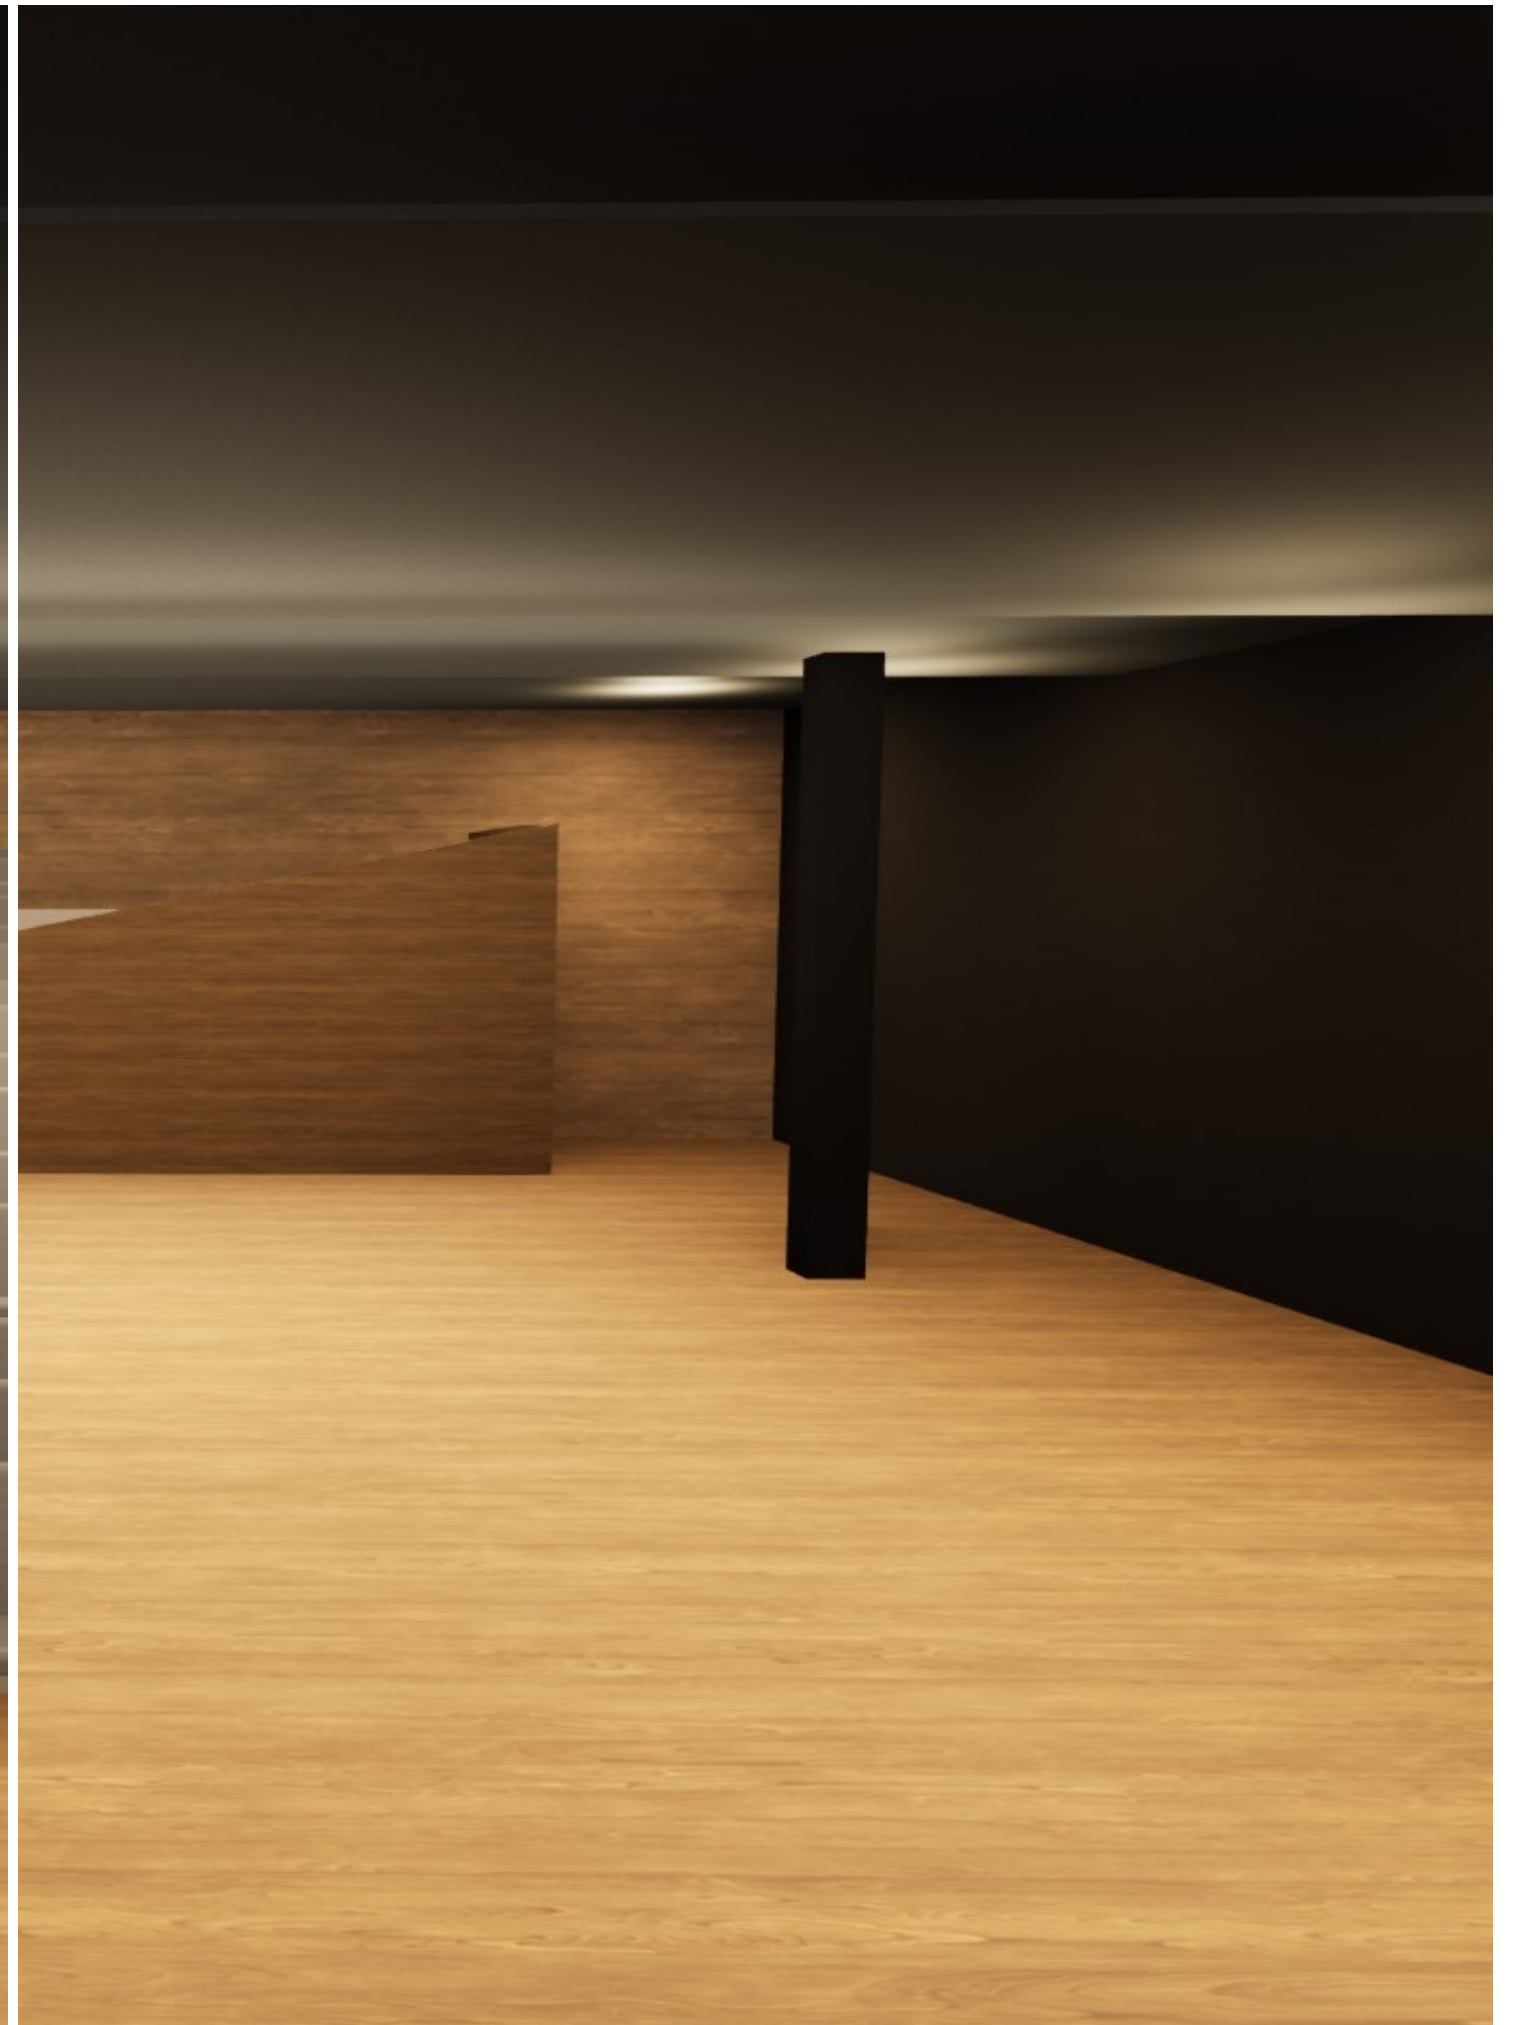

To guarantee the closing of the materials cycle, each and every element used in its manufacture can be recycled separately, thus reducing the ecological footprint.
