

## BLMA 5100

### GENERAL DESCRIPTION

The BLM 5100 is Kotobuki's nod to baseball stadium seating.

This model with independent seat and backrest has been designed to optimize to the maximum the circulation areas between rows and the comfort of the spectator.

The seat, backrest and lateral footrest are only 35 cm deep when the seat is folded, and the useful space under the armrest allows the legs to be moved backwards to increase the free passage area. Likewise, when the spectators are seated in their seats, they can extend their legs and feet under the seat of the row in front.

Seat and backrest with curved and ergonomic shapes are made of blow-molded high-density polyethylene, which confers a very high level of resistance, and at the same time, provides a superior degree of comfort to the user.

Lateral feet made of cast aluminum. They are the structural support to which the seat and backrest are attached. The folding of the seat is produced by gravity and silently through a robust and durable mechanism, which requires no maintenance.

### USES AND APPLICATIONS

Seat suitable for sports facilities where a plus in terms of aesthetic and functional features is required.

In its standard version, this seat has a backrest height of 83 cm and a distance between axes of 50 cm.

It can be installed individually or with a shared arm, either fixed to the floor or to the riser of the grandstand. It allows the incorporation of the following complements:

- Individual or shared armrest.
- High backrest.
- Upholstered seat and backrest cushions.
- Cup holder attached to the back of the backrest.
- Seat and row numbering.

### ECO-FRIENDLY

This product allows the use of upholstery woven with polyester yarns made from recycled PET bottles. In addition, to ensure the closing of the materials cycle, each and every element used in its manufacturing can be recycled separately, thus reducing the ecological footprint.
