

SP- 2000

GENERAL DESCRIPTION

Seat for arenas and stadiums, specially designed for indoor use, in spaces where the aesthetics and warmth provided by wood, are the attributes sought by the customer.

Seat made of beech plywood molded under pressure and high temperature, impregnated with resins of special properties, which transform the wood into a fireproof and self-extinguishing material, with excellent properties of flexibility, strength and rigidity.

The contoured shapes and the lumbar support of the backrest in perfect balance with the curved shapes of the seat guarantee a correct postural support during long periods of time.

The wooden shells are fixed to the support bars by means of metal inserts embedded in the shells themselves and stainless steel allen-head screws.

Support bars for the seat-backrest assembly, made of circular section steel tube. They rest on and are fixed to cast aluminum feet, finished with epoxy polyester coating.

USES AND APPLICATIONS

In its basic version, the backrest is 74.5 cm high and the minimum distance between axes is 45 cm (without armrests).

It can be installed by fixing it to the floor or riser of the grandstand. It can also be installed in layouts with straight rows or curved rows.

As a complement, it can be fitted with armrests and seat and row numbering.

ECO-FRIENDLY

This product allows the use of upholstery woven with polyester yarns made from recycled PET bottles. In addition, to ensure the closing of the materials cycle, each and every element used in its manufacture can be recycled separately, thus reducing the ecological footprint.
